ABOUT ME

Mobile Software Engineer with 4 years of experience building production Android and cross-platform applications using Kotlin, Jetpack Compose, Flutter, and Compose Multiplatform. Experienced in modular architecture, automated delivery pipelines, application security, production debugging, and on-device machine learning. Collaborates across product and engineering teams to deliver reliable mobile solutions.

Languages & Frameworks	Kotlin, Android, Jetpack Compose, Compose Multiplatform, Flutter
Architecture & Data	MVVM, MVI, Clean Architecture, Room, DataStore
Tools & Platforms	GitHub Actions, Fastlane, Firebase, TFLite, ML Kit, MediaPipe, SonarQube
Engineering Practices	CI/CD, unit testing, MockK, Mockito, Android Lint, ktlint, Agile

WORK EXPERIENCE

Pupuk Indonesia **Jakarta**

Mobile Apps Developer *June 2025 - Present*

- Developed and maintained production Android applications supporting subsidized fertilizer sales, distribution, and retail operations.
- Improved crash-free sessions from 82.14% to 99.44% through Crashlytics-driven investigation, lifecycle fixes, refactoring, and device-specific compatibility testing.
- Co-designed and implemented GitHub Actions CI/CD workflows with automated APK/AAB builds, unit tests, Android Lint, ktlint, environment-specific signing, and secret management.
- Automated dev/staging tester distribution via Firebase App Distribution and Google Play release workflows via Fastlane; configured development, staging, and production environments.
- Implemented mobile security controls with freeRASP (root, emulator, and tampering detection), encrypted preferences, token refresh, and JWT-authenticated WebView access.
- Integrated on-device face verification and passive anti-spoofing using ML Kit, MediaPipe, and TensorFlow Lite; evaluated model variants using Firebase A/B Testing.
- Modernized legacy UI with Jetpack Compose; contributed reusable UI components and introduced unit tests, SonarQube, and coverage reporting.

Mitra Digital Asia **Jakarta**

Mobile Apps Developer *December 2022 – June 2025*

- Designed, built, and maintained Flutter applications for client products, working across UI, backend integration, and release processes.
- Built and deployed 8+ mobile applications spanning electric mobility, logistics, commerce, and internal operations.
- Collaborated with designers, business analysts, and backend engineers to deliver cross-platform features and REST API integrations.
- Tech stack: Flutter, Android, Firebase, REST API, Google Maps

PROJECTS

iPubers **Jakarta**
Android Developer *June 2025 - Present*

- Production Android application supporting subsidized fertilizer distribution and retailer operations.
- Owned features from planning through release; investigated complex camera, navigation, lifecycle, and Android-version-specific production failures using Crashlytics, Elastic, Logcat, and Flipper.
- Implemented CameraX image capture and compression flows, improved memory handling for large images, and optimized list and API-driven rendering.
- Integrated on-device liveness and facial verification; used WorkManager to download Firebase-hosted model assets following Remote Config A/B variant assignment.
- Tech stack: Kotlin, Jetpack Compose, CameraX, TFLite, ML Kit, MediaPipe, Firebase, Room

Sales Force App **Jakarta**
Mobile App Developer *March 2026 – Present (In Development)*

- Cross-platform field-visit application for AE/AAE teams covering retailers, distributors, warehouses, and market insights.
- Initiated the team's first Compose Multiplatform project and led architecture decisions in consultation with other engineers.
- Established a feature-oriented multi-module architecture with core common, data, database, domain, design system, UI modules, and delivery feature; applied MVVM/MVI, repository, and use-case patterns.
- Tech stack: Compose Multiplatform (Android/iOS), Koin, DataStore, REST API

My EV **Jakarta**
Flutter Developer *July 2023 - July 2024*

- Developed EV management features including nearby charging stations, dealers, and workshops, with geolocation and vehicle-status updates.
- Integrated map-based discovery and backend services for electric mobility experiences.
- Collaborated on application development, deployment, and maintenance.
- Tech stack: Flutter, Firebase, REST API, Google Map, GetX

e-Trans Customer, Driver, and Store **Jakarta**
Flutter Developer *July 2023 - July 2024*

- A Developed Flutter experiences connecting customers, drivers, and merchants for transportation and commerce operations.
- Implemented customer transportation booking and merchant inventory views with backend API integrations.
- Tech stack: Flutter, Firebase, REST API, Google Map, GetX

EDUCATION

Universitas Brawijaya **Malang**
Bachelor's Degree in Informatics *August 2018 - July 2022*

- GPA: 3.69/4.00
